

SYSTEM FOR PROVIDING MULTIMEDIA PRESENTATIONS

ABSTRACT OF THE DISCLOSURE

This invention is directed to providing compound multimedia presentations on a client side that interacts with a host server connected to the client side by a network. The multimedia files used in the presentation may be embedded in a portable storage medium adapted to operate with the client side and communicate with the host server. The accessibility of the multimedia files on the client side may increase the rate of presentation to the user. The host server may also control and direct the multimedia files in the portable storage medium.
